

## LITERATURE REVIEWS

1. Johannsen, O. A. 1969. Aquatic Diptera. Reprinted by Entomological Reprint Specialists, Los Angeles [P. O. Box 77971, Dockweiler Station, Los Angeles, Calif. 90007]. Part V by Lillian C. Thomsen. 369 p. Hard cover, \$11.25; paperback, \$5.00. 2nd Reprinting, 1970.

The five parts of Aquatic Diptera were originally published as four Memoirs (164, 177, 205, and 210) of the Cornell University Agricultural Experiment Station in 1934, 1935, 1937, and 1937, respectively. This edition is an un-abridged facsimile reprint of the original works.

The Culicidae, including the chaoborids and dixids, are treated in the first part, pages 34-48.

2. Adames, A. J. 1971 Mosquito studies (Diptera, Culicidae). XXIV. A revision of the crabhole mosquitoes of the genus Deinocerites. Contr. Amer. Entomol. Inst. 7(2). 154 p. \$6.00

It has been 12 years since the appearance of the last review of the genus Deinocerites. In that time, much material and information have accumulated on the species of this very interesting genus. Recent studies have shown one species to be naturally infected with the viruses of St. Louis encephalitis and of Venezuelan equine encephalomyelitis. These factors have led to the production of this publication. Eighteen species are treated, of which 16 are known in all stages.

3. 1971. Contributions to the mosquito fauna of Southeast Asia. Contr. Amer. Entomol. Inst. 7(3). 85 p. \$3.50.

IX. The genus Orthopodomyia Theobald in Southeast Asia. By T. J. Zavortink. p. 1-37.

X. The genus Culiseta Felt in Southeast Asia. By N. V. Dobrotworsky. p. 38-61.

XI. A proposed reclassification of Neoculex Dyar based principally on the male terminalia. By S. Sirivanakarn. p. 62-85.

These three papers provide an important expansion of the coverage of the mosquito fauna of Southeast Asia currently being produced by SEAMP.
