

The Authors of Names in Culicidae
1758-1977

Alan Stone
5308 Wriley Road, Westhaven
Bethesda, Md. 20016

The four columns of numbers following the full generic names represent (1) valid names of the generic group; (2) invalid names of the generic group; (3) valid names of the species group including named varieties and infraspecific categories; and (4) invalid species-group names. Names of unrecognized taxa are included as valid pending verification of validity or synonymy.

The alphabetization of author's names does not follow that of Knight and Stone (1977) and is a personal decision based upon consultation with Portuguese and Dutch friends, and the feeling that names like Børgreth, Frauenfeld, Motshulsky, Röder, and the like are much more readily found elsewhere than under "von". Certain names such as de Meillon and Van Someren are so alphabetized following what seems to be firmly fixed usage.
