

Easton, Pa.,

April 11, 1867

Prof. A. Gray,
Cambridge, Mass.,

Dear Sir,

From my friend, Chas. E. Smith, Esq., I learn that in the next edition of the Manual you have reached the *Carex*, & finding in my collections two which may be of interest to you, I enclose Specimens.

The one appears to be a striking var. of *granularis*, well worthy of note. It is much more dwarf than the typical form with bracts & leaves broader & more glaucous, & larger perigynia which are oblong & beakless. In the typical form the doubling is at the tip of the perigynium seems to be caused by the adherence of the style & the less rapid growth of the awns, but here the style is free. I have it from three widely separated localities in Penn. The specimen sent is from Bethlehem.

Porter, Thomas C. 1867. "Porter, Thomas C. Apr. 11, 1867." *Asa Gray correspondence*
