

Davenport Iowa
Oct 9th 1876

My Dear Dr. Gray

Yours of 4th
to hand. Sorry any unnecessary
feeling should be got up over
such a nice bone.

The whole matter seems to
turn on a single point. Is
there a F. Parrot? I do not
know of any. If I had I should
have been the first to object
to the ~~x~~ ^{as} is acting out of
the question. Know my Lemur
as I think I do, I fear he
will not take kindly to the
change you propose. I have been
aware of jealousy which I have
tried to stifle down, in which
I think Lemur is more to blame
than Palmer. Though perhaps natural
& not altogether excusable.

I still think of your reasons hold
good. That you should dicto L. Palmeri
The history of the matter is simply this
Early in May. Lemmon myself &
one other companion made a trip
to the head of the Mojave, in searching
the desert plain we encountered a
number of interesting things. and our
time being short were on the run
hurried to secure what we could.
I saw plenty of the filic, but took it
for a var of f. dianthofila s. did not
gather a single specimen. Lemmon sharper
yes noticed the difference and when he
called my attention to it I saw at once
that it was distinct and if not f. denaria
probably new. On this Lemmon suggested the
name, and as I supposed sent you specimen
at the time, as he did to other parties under
that provisional name I will try & explain
to L. but beyond that would prefer to let the
matter drop certainly safe in your hands.

Yours

C.C. Parry
