

25, WILTON PLACE.
S.W.

London

April 21/79

My dear Gray

As I have pretty well finished the
order I undertook for the new part of
Gen. Pl. and Foster has still the *Balanophorae*
and *Symmeristaceæ* to do I have taken in
hand the *Eriogonea* which he had intended
to work up. In the *Eriogonea* I must
pretty well follow you and I will therefore
write now to ask you whether you really
concur in merging *Centrostegia* in *Chrysanthemum*
for it appears to me to spoil the character
as well as the name of the latter genus in
which the involucle is constantly and deeply
uniflorous and unless you insist on the
consolidation I should like to keep *Centrostegia*
distinct - Gray answer as soon as convenient.
As we hope now to begin printing
what is *Bittereria* published? I happen
to me to go with *Nema caerulea* and *Lactaria*

into a little group of droplets without
any gamophyllous involucres but detached
bracts, perhaps connected with a pair of
lateral bracteoles, or stigmas such as form
the 3-pd bracts under the ports of the
capitulae of *Drosera*, or all passing
into leaves. In *Hottentotia* the bracts
on both sides, as well as the perianths, are
densely woolly, in *Nemacaulis* the bracts
on the inner side densely woolly outside
glabrous, and the perianth glabrous,
in *Sedum* the bracts or floral leaves
and perianths have only a few woolly
hairs on the margins, or rarer surface.

I was rejoicing in the weight
for the book post in the postal union
being extended from 2 to 4 lbs when
I came upon a statement which renders
it nugatory for the United States. To go
by post the book must be 20 years old
or under a dollar value. This would

entirely preclude the sending by post a
part of our genera or even of the
species - I should be glad to know
if it be so really

Yours very truly
George Bentham
