

My Dear Mr. Wallace

I am reading with much interest and gratification your Island life, and have gone nearly through the first part.

When treating of the general persistence of continents and oceans and citing some geological authorities you might however <sup>wish</sup> be glad to know that you have that of my countryman Prof. Dana. I think it was as early as the year 1845 that he laid this down very slimly in an address as Pres<sup>t</sup> of the Am. Ass<sup>s</sup> for Advancement of Science. I do not know if it is made prominent in his biography.

The close of your chapt. VII, p. 119, 120, would so completely serve for an abstract of the report of a published lecture of mine which you once did me the honor to command that I should have been pleased if you had referred to it upon this occasion.

Always sincerely yours

Asa Gray

W. H. M.
