

Albany, March 8<sup>th</sup> 1883.

My Dear Sir;

I have at length looked through the fungi of 1882 which you sent me sometime ago and inclose a list of those determined. Several which looked very promising at first sight failed to yield me any spores or fruit and of course have to be left undetermined on that account.

Those on Agave, Opuntia, Castanopsis Yucca etc. are of this class.

A few are new and interesting. The beautiful Podaxon I was very glad to get. Lycoperdon cyathiforme was interesting as showing its range. It extends all over the United States.

Very truly Yours  
Chas. H. Peck.
