

ments about the mosses.  
The Characeae I shall  
have to attend to myself,  
for being brittle I cannot  
trust any one else to  
arrange them. The life  
of one in charge of a  
large herbarium, you  
will see, is full of  
surprises many of which  
are not altogether agreeable.

Yours, very truly  
W. G. Farlow.

Cambridge  
Dec. 8.  
1914.

Dear Mr. Collins,

I am greatly  
obliged to you for  
the information you  
sent in regard to Mrs.  
Dunkham and Miss Kendall  
as well as for the  
valuable advice you  
gave me on Friday in  
regard to the destruction  
of our bryological collections.

On Monday I went  
through all the packages  
on the table which you  
thought were lichens  
in order to see whether

Miss Neikeson could  
arrange them and, if so,  
about how long it  
would take. It is  
lucky that I did for  
I found unexpected  
things. Perhaps a third  
of the packages were  
lichens. Then came some  
packages of fine specimens  
of Characeae and all  
the rest were mosses  
including some of Hels.  
James with a number  
of good things from  
Lindberg and a package  
of mosses of the Oregon  
Boundary Survey and  
of the Palisade Expedition

to British North America.  
The latter were valuable  
and had come from  
Aew but I have not  
yet found out whether  
they ~~were~~ were sent  
to James or Prof. Gray.  
I shall compare them  
with the Gray and James  
mosses and, if already  
represented in those  
collections, I shall  
have this newly found  
set pasted in a book  
and kept with an eye  
to future exchange.

Miss Neikeson  
is now at work on  
the lichens and when  
she is done, I shall  
proceed to make arrange-
