

New Haven, Connecticut,

Sept. 13, 1909

Dear Prof. Collins -

I am enclosing a specimen which may interest you - an addition, I believe, to our New England moss "flora." I have been expecting to find it, and stumbled across it yesterday at the shore. Shall try to get better material later! However I send both old & young sporophytes.

Another "fancied" work "species-and genus," that I located this summer was *Anacamptodon* Oplach. - our old friend, this time in Cape Buttrick Island. I cannot send you specimen of this, as there was only a scrap - less than an inch in diameter (in full fruit), and I

New Haven, Connecticut,

19

imagine Macromones like a
piece of that. I have a
few *Polytrichaceae*, ^{from there} however,
of which I will be glad to
send you specimens if you
desire.

As soon as I have
time to finish working up
my Cape Breton collections
shall publish a few more
notes - incidentally bringing
in *P. brachyphyllum*. Dr. Evans
found 44 hepatics among
my material, a few of con-
siderable interest. C. B., however,
does not compare with the
jarpe region, judging from
Allen's collections there.
Sincerely
Geo. E. Nichol.

Nichols, George E. 1909. "Nichols, George E. Sept. 13, 1909." *James Franklin Collins correspondence*
