

Monte Verde

Sept 15th 1860

My Dear Dr.

I feel grovly & if you catch it some
I hope you will have patience to bear it. I
return here after two months absence in hopes
to find something satisfactory something cal-
culated to enable me to plan out my future
work. I find nothing. Two little scraps of
letters from you since the 18th June. nothing
yet from Cator nor Sullivan an enigmatical
line from Engelmann. A letter from Baird tells
me that my zoological specimens in the little
bottles were all spoilt but does not explain the
"how" so that I may pack them better in future.
Not a word from any body relative to my petition
for a collaborator.

As long ago as May 28th you announced your
intention of sending me Darwin's book by the first
vessel up for Cuba & May 5th you wrote one
of the purchase of the "4 big Dicroidiums". In the
mean time you seem to have forgotten both & in
your last come to the conclusion that I am
about to return home & probably won't send them
at all. What am I to do with the "4 big Dic-
roidiums" at Cambridge or Wethersfield? I
don't know what is come over you. You seem
to have an unusual fit of forgetfulness. I think
I suggested to you long ago to put such things
into the hands of some shippers from Boston to Cuba
& not bother yourself more about them. Well maybe
I'll get them six months hence about the time I
wish to return & can amuse myself with them
on ship board. But your treatment of me is really too

tar. I can't excuse you. You ought better to appreciate my situation. Nearly all the time I am without much intellectual aliment & sometimes without any at all. I know you are busy - so much stronger motive to turn this business over to other hands. Not a word neither relative to the plants I have enclosed. A late letter contained some but I shant trouble you with any more. It is trouble without any benefit to me & you will see them all by waiting. I have found but few ferns that had a new look. Henceforth I shall not take any special pains to get a great number of specimens for I never can know when I have enough for full distribution & I see no possible way of filling in those ~~defective~~^{lacking} numbers I thought there would be at least thirty full sets but when I learn that they are whittled down or duplicated in the distribution (making an auger hole with a ~~gouge~~) or got rid of in some way so that the 25th set only counts 202 & the 34th only 163 I am not a little disengaged & now five or six months are gone & I get not a word of explanation. It's confoundedly provoking. If any mode of filling up these defective or partial sets can be hit upon the delay of month after month will at last render unavailable.

If a zoologist should come out don't forget to send me a good large magnifying & it would be well to just in a dozen cheap ones for distribution among the people when we are particularly well treated. An opera glass too would be a great conciliator of the people. Put in a few good strong pocket knives. I go on losing & breaking as usual. That Bomplaecon tree puts out its leaves during my absence & at or about the same time opens its pods & sheds its cottony seed. I doubt if I shall secure good fruit but leaves I will be able to get I hope 17th I shall set out for N. Sophie tomorrow or next day & soon start for Brayton.

Yours truly Chas Wright

Wright, Charles. 1860. "Wright, Charles Sept. 15, 1860." *Charles Wright correspondence with Asa Gray*
