

SYNGNATHUS ÆQUOREUS.—Yarrell.

A fine specimen of *S. Æquoreus* was found upon the sea beach near Bamborough, in February, 1838. It measures $18\frac{1}{2}$ inches in length, and agrees in all respects with the description of the species given by Mr. Yarrell in his History of British Fishes.—P. J. S.

PETROMYZON PLANERI.

Upon turning to Jenyns' Manual of Brit. Vert. and Yarrell's Brit. Fishes, I find that this little fish has only been noticed in a few parts of the kingdom. I therefore suppose that it will be interesting to naturalists to learn that it occurs frequently in small brooks in the neighbourhood of Framfield, Sussex, where I have recently taken numerous specimens.—April 19, 1838. Robert M. Lingwood.

It is Mr. D. Cooper's intention to form a class this summer (similar to the one last year) for the study of Practical Botany. The excursions to take place twice every month, from the beginning of May. The day hereafter to be fixed most convenient to those who may form the Class.—82, Blackfriars Road.
