

Charlotte, Vermont.  
15-Dec., 1886.

Dear Dr. Gray,

Accept my thanks for your prompt report on my little parcel of specimens. Here are a few notes -

I am especially grateful to you for your kindness in conferring an honor on my excellent associate, Mr. Horsford.

You seem to anticipate there being another year of my botanizing in Mexico. I assure you I have no thought of giving up.

Yours faithfully,  
C. G. Pringle.

744. Brickellia solidaginifolia, Gray n.p.  
dry, cool slopes, Mapula Mts., 20 miles  
south of Chilimalua, growing in clumps  
of several stems.

✓ 752. You thought this a small form of Gnaph-  
alium Binsleyi Gray; but its stems are  
usually simple and strict, and never  
glandular viscid. It agrees exactly with  
Palmer's 417 of 1885 (as it came in my  
set,) labelled "G. leucocephalum"; but that  
is apparently an error. Its akenes are  
scabrous, while those of G. Pringlei are  
smooth. But I believe you do not regard  
this as an important character.

753. Gnaphalium leucocephalum, Gray.  
Habitat the same as given by you in N. A.  
Flora. Palmer's specimen is ticketed G. lept-  
phyllum, St.

762. "Hymenoxys Wilsonii, Gray." In valley  
near Chilimalua I got a plant agreeing  
with my specimens from the plains of

Arizona; and when I found this in  
thin dry soil of the western hills, and  
noticed its wide-margined pappus  
I supposed I had a different species,  
possibly *A. Palmeri*, Gray, 1885.

763. *Senecio Pringlei*, Gray n.sp. Shaded  
places, Mapula Mts.

782. *Gomphrena Pringlei*, Gray n.sp.

Charming; for it is a most beautiful plant.  
Cult grassy slopes of hills near Chihuahua,  
(South Eulalia and Mapula Mts., or rather  
their foothills.) Several erect, widely branching  
stems, about two feet high, from a thick  
knotted rootstock (perennial.) If the base  
is thickened in the way of *S. leptophylla*,  
I failed to find it by much digging.  
Flowers purple rather than wine-colored as  
they appear in the dried specimens.

775-9. *Pentstemon rotundifolius*, Gray n.sp.

You might with propriety have called  
this *P. muralis*; for it hangs from the

merest scums of dry mountain walls,  
when not fully exposed to the sun.

Its thick leathery leaves and irregularly  
branching stems endure for years, and it  
seems to flower throughout most of the  
year. Mapula, Potrero, and other moun-  
tains near Ch<sup>a</sup>.

786. *Lycium Berlandieri*, Stevns. This is from  
opposite El Paso, where young Vasey got it  
and ticketed it *L. Torreyi*. You would  
prefer I should distribute it as above?

1149. *Pinaropappus junceus*, Gray n.sp.  
Grassy slopes of Mapula Mts. But very  
few specimens seen.

1156. *Bowardia gracilis*, Gray n.sp.  
Yes, flowers white.

Pringle, Cyrus G. 1886. "Pringle, Cyrus Guernsey Dec. 15, 1886 [Pringle to A. Gray]." *Cyrus Guernsey Pringle letters to Asa Gray*
