

The characters of the first two
species read very much, but
they don't work so well in
the specimens. I have the
3 parts of the Canada Flora,
fine work - Did you never meet
Penhallow? I like him very much.
Bailey is well and hard at work.
He sent me lately *Carex glauca*.
I enjoy my microscope immensely.
When I feel up to it, I
shall have a $\frac{1}{8}$ objective, a
more price & movable stage -
You know I can't possibly duplicate
that Clematis section of yours. It
does illustrate so many nice things.
They don't sell any more slides at
the Educational Supply. Thank you
very much for the loan - I will
return by Hal - Have written today
to Barnes, Bailey, Lloyd, Knowlton,
Forster (for an article) and the Southern Pioneer.
Kind regards to all N. Deane -

Cambridge Mass.
Feb. 20 - 1887.

My dear Mr. Kennedy,
I really never meant
that I should first receive
a line from you on your
return home - But I have
and I was glad enough to
hear from you - Welcome
home, you and yours from
the bleak North!
And first how very thank-
ful to must all be to
a merciful Providence that
kept you away from the
ill-fated train. To be so
near to a disaster makes
one shudder and think how

I am so sorry about your cold. How is it?

quickly any one of us may
be taken away - I don't
mean to be gloomy about it
but it does make me think.
You will have much to
relate, as indeed you always
do, and I am looking
forward to some of Mrs.

Remedy's amusing stories
when I see you all again.
I have been business person-
ified. I am working on the
Histology of Goodale's Book and
am in constant correspondence
with Barnes, asking him lots
of questions. Not that I
accomplish very much, but
I am getting a very good
idea of it all. I think I can

defy anybody who knows nothing
of the subject, to get a good
clear idea of the primary and
secondary structure of roots from
Goodale's Book. Barnes' letters
are invaluable. Then Barnes
calls on me to trace and copy
this & that at the Garden and so
he says we are quits -

All my Man. plants are now
in my Herbarium, the first
time for a year - I rejoice.
Knowlton sent me from the
National Museum, lately their
Genus *Stemida* (including *Monetia*)
to verify. It rather startled
me at first, but I worked
at the Garden all yesterday P.M.
and shall send them back
to-morrow. It is hard genus
especially 2 species - Vide
Bot. Gaz. Vol. 1 - page 47 & 48.

Deane, Walter. 1887. "Deane, Walter 20 Feb 1887." *George Golding Kennedy correspondence*
