

Rutland, Vt., Mar. 29, 1904.

H. H. Kennedy,

Dear Sir,

Have hoped to see
your list of Willoughby
plants before now.

I was up there for two
days the last of May and
went to the Summit Sep. 13.

The *Crataegus* that grows
on the Summit, first found
by Edwin Paxson, appears
to be *Crataegus medium*
Sarg. I am getting ready to
publish the Fern Flora of Vt.
in the Fern Bulletin and
would like a complete list
of the ferns of the Willoughby

region. The more common
ones are the ones I need to
know most about.

I believe all of these have
been found there

Woodsia glabella, W. hyper-
borea, Pellaea gracilis, Pellaea
atropurpurea, Asplenium
viride, Asplenium Putnami
ria, Aspidium Goldianum
Botrychium as well as Ferns
I want. Our Spring is not
opening up as early as last
year.

Yours truly
W. W. Eggleston

Eggleston, W. W. 1904. "Eggleston, Willard W. 29 Mar 1904." *George Golding Kennedy correspondence*
