

I collected Anacampyodon & black nails
at Chocoma. Did you not collect it
in Vermont?

HERBARIUM AND MYCOTHECA

W. G. Farlow

Cambridge, Mass., U.S.A.

Sept. 20 1908

Dear Doctor,

I returned to Cambridge
yesterday and found your box
of Celtis leaves with a gall. I showed
them to Henshaw who said they were
caused by Psylla mumma. I am not
sure that I have the specific name
correct.

Since you have Celtis near you
I wish to ask a favor. There grows

on Celtis a mildew, Uncinula ^{parvula} ~~parvula~~
of which I wish to get a quantity. Celtis
is not common in regions where I
butanize and I have not been able to
collect the mildew. As mildews are
unusually abundant this year, you may
perhaps find it. To the naked eye it
looks like the mildew on lilac only not
so dusty and the black, spherical fruit
almost needs to be seen with a hand
lens. Where there is any there is generally
a good deal and it is only necessary to
press leaves so that they will not curl up.
I return to Chocoma on Monday and come back
for good on the 30th if you get affected leaves
and don't want to press them (I should like 50)
you could roll them up and send them to Lyman.

Farlow, W. G. 1908. "Farlow, William G. 20 Sept 1908." *George Golding Kennedy correspondence*
