

Boston August 14<sup>th</sup> 1897

My dear Doctor,

I am back to my work here & find the city very comfortable after so long a vacation. I spent Wednesday at the Green Herb. with Mr. Fernald & Dr. Robinson. The Dr. took me to lunch at the Colonial Club where I met Dr. Farlow. I broached the Fernald matter to him & he was very nice & said he would contribute but how much I don't know. Mr. Kidder is in Europe for a short stay & will be back by the middle of Sept. Underwood was at the Green Herb. when Dr. Watson published the 6<sup>th</sup> Edt & was thought much of at that time. It was Dr. Watson's idea to have him & also to include the Hepaticae - nobody knows why & therefore. Farlow is at work on his great fleshy fungi work & has an artist come every day a Mr. Bridgman I believe. I was gratified to learn that a Picea which I picked at Mt. Dene

for nigra is probably right. This adds a species  
to the Mt Desert list & is the only thing I can  
claim to have found. Rand has gone over the  
island, magnifying glass in hand & there is pre-  
cious little left for adventurous botanists to  
discover. The Myosotis collina which I found  
at Pt of Pines with Rich & Greenman is new  
to New England. There is a sheet of it in the  
Spray Herb. from Ithaca N.Y. & one from Ontario  
Canada. The Tayloria moss which you gave  
me is only  $1\frac{1}{2}$  inches wide but there are five  
or six plants of the pale stalked with long large  
capsules moss which is the one to have sent.  
it.? I am going to Gloucester tonight with Rich  
to spend Sunday. The little one flowered Campana-  
nula rotundifolia of Mt. Washington summit,  
especially of Mt. Monroe is var. arctica of Lang  
I made it that & Fernald confirms it. Dr. Robin-  
son with me Wedn. & went over all my  
plants to Leguminosae. It was for the list  
work - but also greatly to the advant. of  
my Herb. as he set me straight on Lecheas

and Brassicas. I had a *B. juncea* labelled canna-  
pestris & I think we probably all have. Lechea  
minor as we thought in the Blue Hills is Lechea  
maritima & Lechea maritima of the Willer  
House (fide Britton) is Lechea juniperina, Bricknell.  
What a saucy review of the 2<sup>d</sup> part of the  
Ayu. Flora is Bricknell's in the last Forney  
Bulletin! His impudent assumption of his  
capacity to criticize botanical work of high  
order like Robinson's is quite refreshing in  
a mere tyro.

Please give my kindest regards to Mrs. Kennedy  
& Miss Ingall & believe me to be

Sincerely yours  
Emile F. Williams
