

Rutland, Vt., Feb. 14, 1879,

My dear Mr. Deane.

*Potamogeton Robbinsii*  
sent you is in or near fruit-  
ing condition as I have ever  
seen it, and I have examined  
thousands of specimens.  
*P. Connecticut* was the best  
I had, could find no mature  
fruit, although at the time I  
did not know what I had.

Edwin Taxon found it in  
the same condition at  
Lake Dunmore Vt. Will  
make another endeavor for  
both next season and you,  
may be sure you will get

some if I have good luck.

Don't blame you for wanting  
fructing specimens, I do.

I enclose you a small list  
of my especial desiderata,  
you see Lepidium pedunculatum  
is at the head of the list,  
but pick out plants such  
as you think I want.

Do you want another draw  
on my credit at the Sandberg  
Ex.? I have four hundred  
at my credit now and shall  
have to get my friends to help  
me out. Found a station  
for Eriophorum Virginianum  
var. album in St. last summer

Do you want a sheet? Is this  
the only one in New England?  
Just found out about it a day or  
two ago. W.W. Eggleston,

Eggleston, W. W. 1899. "Eggleston, Willard Webster Feb. 14, 1899." *Walter Deane correspondence*
