

Rutland, Vt., Apr. 26, 1902,

My Dear Mr. Deane,

Thank you for the book I received it all right and forgot to acknowledge. I enclose a photograph which you asked for long ago. First time I have had one taken since then. Send you all of your *leptaeus* but *Bilimorea*. I sent you sheets of *lobudata* and *dilatata*, if you already have those you might give them to the Gray

Herb. Let me know if you do. The dilatata I sent last year is declivis, Ashe

1130 is probably Holmesiana, Ashe, flabellata was Dr. Sargent's first name for it. Will have the true flabellata for you this year, also submollis. The only unnamed form of mine you have now is $\frac{1144}{1150}$ I hope Dr. Sargent will name that this year. That Crataegus puzzle is going to make some work for some first class botanist twenty years from now if he can have a chance to study all of them in the field.

Am going to take a long lower St. Lawrence trip this summer. W. C. Eggleston.

Eggleston, W. W. 1902. "Eggleston, Willard Webster Apr. 26, 1902." *Walter Deane correspondence*
