

Agricultural College, Mich., July 3, 1885

My Dear Deane:-

No. 17. *C. trisperma*

18. *C. Pseudo-cyperus* var. *comosa* W. Boott. (*C. comosa* Boott) It comes very near being the species.

19. *C. bullata* Schk. This is a peculiar species. I can always distinguish it at a glance but I cannot define it.

20. *C. utriculata* - good find.

I have a job for you: Please look in Boott's Ill. for *Carex ustulata*. See especially if you can find any mention of the plant ~~being~~ having an androgynous terminal spike. What is the habitat? Also look in Lange's recent Flora of Greenland (Mr. Watson will find it for you) and see if the plant is mentioned. I refer to *C. ustulata* Wahl. One of the Greeley carices appears to belong to that species.

Does Boott figure *C. compacta* R. Br.? If not, please look in Pretzel and see if anyone

else figures it.

Very hot to-day. Students are
going home for the glorious fourth.

Mrs. Hardy is very feeble.

Regards to Mrs. D. How many books
has she sold?

Yours as ever, but dirtier,

L. H. Bailey, Jr.

I am a farmer and gardener now-a-days.

Bailey, L. H. 1885. "Bailey, Liberty Hyde Jul. 3, 1885." *Walter Deane correspondence*
