

POPULUS MATERIAL WANTED

The planted poplars are so little understood that I am making an effort to assemble herbarium material from all parts of the country. I want pressed specimens of catkins and mature leaves from any and all poplars planted along streets, in yards, parks and nurseries. The name under which the tree is popularly known should be entered on the label, also the current botanical name if you know it.

If there are such trees within access, will you not aid me to secure specimens? The trees from which catkins are taken should be marked, so that foliage may later be had from the same tree. If catkins and foliage are taken from different trees, in any case, the fact should be noted on the label. Both sexes should be secured, when they exist. Any notes on the label as to size and habit of tree, character of bark, etc., will be very useful.

Any photographs to show shape and habit of tree will also help me in working up the material.

An item of cost of the material may come with the specimens and will be promptly paid.

Of course I also want any herbarium material of the native wild poplars.

L. H. BAILEY.

Ithaca, N. Y.

*I am sending this to
200 botanists in the U.S. and
Canada.*

POPULUS MATERIAL WANTED

The largest possible size is the most desirable. I am not in a position to attempt to assemble a collection from all parts of the country. I want to see a specimen of each of the various forms that are now being planted along the river in the various States. I want to see a specimen of each of the various forms that are now being planted along the river in the various States. I want to see a specimen of each of the various forms that are now being planted along the river in the various States.

If there are any more of these forms, I will not mind me to receive a specimen. I will not mind me to receive a specimen. I will not mind me to receive a specimen.
