PURPLE-TAILED PARRAKEET.

Latham. vol. 1. p. 315.

The colours of this most beautiful species, which is a native of Cayenne in South America, are of uncommon brilliancy. It is principally distinguished by the purple rectrices, or tail-feathers; except the two middle ones, which are green. It is one of the rarest birds of its genus, and we believe this to be the first figure of it yet published.
