

Herbarium & suppose they can turn  
to their aroids, and readily answer  
my question about the synonyms.

With kind regards to you  
and Mrs. Deane,

Yours very truly  
Maria L. Oaren

P.S. I think one of the specimens  
is plainly at virginica.

M.L.O.

Springfield, Nov. 10. 1902.

Dear Mr. Deane,

At the date of your last  
letter Sept. 7 - you had nearly finished  
the work on the book that was going  
through the press, and expected to go  
away for a well-earned vacation. I  
hope you had a pleasant time. I  
was away from home ten weeks, —  
spent eight in Maine, and saw grow-  
ing and in flower and fruit the Yellow  
Rattle, Rhinanthus Orientalis, a  
pretty little thing; nothing else new.  
Then I went to Nantucket, where I met  
Mr. Dame and Mr. Lloyd, and had good  
conversations with both, but you have probably  
seen them yourself at the meetings of  
the society, and heard their botanical news,  
— if any.

In a previous letter you asked  
me to collect Acalypha gracilens for

You now I desire to remark that I never said it grew here, but that there was this marginal note in my Manual against A. gracilens as it was then named; later it was called var. gracilens, and what it is now, I don't know. But the note - "Agree in every respect except that the sterile spind is not as long as in the description." I did not see much of the plant after I came back, but I collected and pressed a few specimens that looked a little different from A. Virginica. Probably they are only some of the many forms of that species, but I should like to know what you call them -

I have an interesting friend that I wish I knew the name of. The person who gave me the bulb did not know the name, and I have had

to search for it myself. While I have good reason for thinking it Amorphophallus Rivieri, it may perhaps be Godwinia gigas found by Seeman in Nicaragua. But again, it may be Dr. Beccari's plant of western Sumatra which he proposed to name Conophallus Titani. If this name and Amorphophallus above, should prove to be synonyms, I should feel pretty certain ~~that~~ of my plant and the only way you can help me is by inquiring about it at the Botanic Garden, some day when you are in -

My plant has not bloomed; the bulb is still too young and small, but my friend's has, and I have seen - not the flower, but a photograph of it.

Take no special pains; I am in no hurry, only if you will remember me when you are at the
