

I have rec'd a letter from Hochstet.
He will come here soon. Faun
says his publisher in Philadelphia who
is setting up a splendid ed. of his
reports (3 volumes to be added to those
printed by Cope) will have a few
of the more interesting plants figured.
Dr. J. W. Hooker I think shall do the draw-
ings.

I spent all last evening with Dr. Alary
Clark, examining the famous "frozen"
plant that grew on a boy's leg. I suppose
you have doubtless read wonderful
stories in the newspaper. It is
undoubtedly a vegetable - a fungus.
I succeeded in finding the thecae
or spore cases - & the spores themselves
are innumerable. If the plant
had grown in the earth I should call
it Ascaris. So much does it resemble
the figured species, ~~it~~ even in the
form of the spore & their thecae. My
love to Jane & if kind regards to Wright
Ever yours. Standen Torrey

New York. Jan 9. 14th 1858
My dear friend -

Here I am at my table in the study
using the notes that I made in Cam-
bridge, & putting my last words to Appeli-
daceae, which are now tolerably satisfactory.
I mean the species belonging to Mex-
Boundary.

I had a pleasant time at Hayes' &
we talked Chemistry till towards the
morning. The good soul had me out
of bed again at 6.30. & Mrs. H. made
breakfast for me before 7 o'clock - so I
was comfortably seated in the car in
a half hour later. I found all
well at home - Maggie not, to be sure,
quite well - but in good spirits.

My ride home was very comfortable, &
I was able to read nearly the whole distance.

I see you now pottering at your desk. &
you good dame reading an interesting
book in the Small Study. My clear
voice is not sufficiently distinct in

regard to Mr. Wright - but I think I see him also - busy at his own table over the Hongkong's. What a pleasant little gathering it was at your father's! I feel quite at home there. I trust that I am no burden - but whenever I see a happy mother at the head of her family I appreciate my own irreparable loss - now as greatly as ever. If I were not so constantly employed I should be unhappy indeed.

How kind your Jane was to me! I can make no return, but gratitude, coldly thrown of remembering her & you in my poor prayers.

Savp-19th! Negligent again - but I have been much preoccupied - & I lost this note after I committed it to the postman up this morning.

I work to finish the Utricles of *Dunali* plates - but these are scarce that I wish you given concerning life

deciduous or like names. Have you reexamined *Tetraclena*? If you remove it to *Trichotoma* shall the specific name remain unchanged? I happen to - I wished to give *Salyzia* (which was at first called *Cysticula*) - a specific name that would be suggestive of the Mexican *Compositae* species. What think you of *S. unifloris*? Is that too far-fetched?

I can not see in what *Acanthoclelea* Engelm. differs from *Momisia*. The N.-Mex. species seems to be undivided. Is it in your set of Berland. N. S. as has it been named by any European author so far as you know?

Polygala ciliolata Benth. must be R. Nuttall's. Some of my specimens show radical flowers. What say you?

Torrey, John. 1858. "Torrey, John Jan. 14, 1858." *John Torrey letters* –.
