

San Francisco, Cal. June 27. 1886.

Dear Dr. Gray.-

Last Monday I went down to Crystal Springs, one of the sources of the water supply to this city. I had never been there; and I guess no collector was ever there at this time of year, for I found a most remarkable thistle which is evidently new. I send now a head, reserving a good specimen for the next parcel that may go to you. This discovery awakens in me a strong desire to have something more than a description by which to identify C. Andrusiae in case that rare and obscure plant ever comes to light again. Can you send me at least a few scales or bracts of an involucre of it.

My new one is confined to the springy ground otherwise occupied by Mimulus, Juncus, & Epilobium. On the dry stony places above the springs grows plenty of C. quercetorum. This new one is also a diaspisiferous plant, with all its heads nodding; color of corollas dirty white. The strange, foliacous, incurved bracts left me at first to suspect it of being some

foreigner; yet such it can not be. It must
be quite local, I think.

I am to be off in a week for the S. Barbara
Islands! I shall come back rich if I
only get good material of Lyonothamnus,
asperrifolius and Eriogonum arborescens, which
I have already published from scraps brought-
in by botanical visitors.

Are you not coming west anywhere this year?

The bad cough you complain of in June last
should indicate a retreat to the wholesome air of some
of our mountain districts when you know you can
work also in botany to advantage.

I hope, at all events, the summer weather may
be kind to you.

Yours very truly

E. L. Greene.

P.S. I shall be absent for about three weeks.
